(mathematical) modelling outside mathematics education research. However, the realistic perspective is really taking the subject area of the application of mathematics very seriously, and actually in this perspective is seen as an interdisciplinary problem solving activity in which, of course, mathematics is playing a very important role.

Mathematical applications and modelling in the teaching

the model equations may never lead to elegant results, but it is much more robust against alterations. 1.2 What objectives can modelling achieve? Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is ...
