Smart Buildings have several things in common: Integration of building systems on a common IT infrastructure or shared network utilizing open protocol and common HMI.

Smart Buildings - EnergyWorks

A smart city is an urban area that uses different types of electronic data collection sensors to supply information which is used to manage assets and resources efficiently. This includes data collected from citizens, devices, and assets that is processed and analyzed to monitor and manage traffic and transportation systems, power plants, water supply networks, waste management, law ...

Smart city - Wikipedia

The SBC hosts a lending “library” of diagnostic tools available to building owners and managers, as well as energy service professionals in Washington State and Oregon, for short term data collection on energy using equipment and systems in commercial and institutional buildings.

Tool Lending Library - Smart Buildings Center

This paper defines the concept of 4th Generation District Heating (4GDH) including the relations to District Cooling and the concepts of smart energy and smart thermal grids. The motive is to identify the future challenges of reaching a future renewable non-fossil heat supply as part of the implementation of overall sustainable energy systems.
