Wiring is an open-source electronics prototyping platform composed of a programming language, an integrated development environment (IDE), and a single-board microcontroller. It was developed starting in 2003 by Hernando Barragán. Barragán started the project at the Interaction Design Institute Ivrea. The project is currently developed at the School of Architecture and Design at the ...

IM-P343-40 CH Issue 1 5 The HART® network uses the existing wiring of the 4 - 20 mA command current loop. The HART® digital data is coupled onto the analog signal by the use of phase continuous, frequency shift keying (FSK) at a fixed baud rate of 1 200 bits per second. The command input circuitry filters this super-imposed signal so that analogue positioning
