A winter storm is an event in which varieties of precipitation are formed that only occur at low temperatures, such as snow or sleet, or a rainstorm where ground temperatures are low enough to allow ice to form (i.e. freezing rain). In temperate continental climates, these storms are not necessarily restricted to the winter season, but may occur in the late autumn and early spring as well.

The set-up for this snow event is nearly perfect, with a low center near the SW tip of WA State and very cold air over British Columbia. The reason why this is the "perfect" snowstorm situation is that the low center draws cold air into western WA from BC (a lot of it through the Fraser River Valley), while pushing moist air overhead.
